

# FIRE trial during COVID-19 outbreak

Dear FIRE investigators,

- COVID-19 outbreak represents an enormous challenge for healthcare systems and professionals worldwide. *It has our full understanding and support if research unrelated to COVID-19 has lower priority at this time.*

Still, please consider that FIRE trial is:

- a study regarding in-hospital strategy with no drug involved in randomization
- MI patients are and will continue to receive coronary artery angiography and PCI

Thus, **FIRE is actually open for enrollment**

- Obviously, avoid to enroll COVID-19 + or COVID-19 suspected patients
- We will limit communications and requests to sites until we see a more stable situation
- For any question, please feel free to contact us ([simone.biscaglia@gmail.com](mailto:simone.biscaglia@gmail.com) or [cmpglc@unife.it](mailto:cmpglc@unife.it))

**Most of all: stay safe!**
